FEATURES & BENEFITS

The Powerscreen® 1000SR is a highly compact crushing & screening plant that combines the benefits of the 1000 Maxtrak & Powerscreen Chieftain 1400 on one chassis to form a highly manoeuvrable self contained, closed loop plant that can be easily setup. The 1000SR has been designed for direct feed applications without pre-screening on clean rock. At the heart of the Maxtrak is the Automax® cone crusher with hydraulic setting, tramp release & unblocking system.

The Powerscreen® 1000SR is suitable for secondary & tertiary applications, it features a recirculating conveyor & a double deck screen to provide the complete crushing & screening process on a single chassis. The Powerscreen 1000SR can produce up to three end products when oversized material doesn't require recirculation to the crusher.

- Output potential of up to 230 tph / 253 US tph - depending on feed material and crusher settings
- Combines crushing & screening capabilities on a single plant
- Suitable for recirculating oversized material
- Renowned Automax® crusher technology
- Accepts clean 'all in feed'
- High reduction ratio, excellent product shape, rock on rock attrition crushing
- Cone feed box level control to maintain choke feeding

Scania Stage V / Tier 4 Final Technology

Scania industrial engines meet the requirements of Stage V and Tier 4 Final without the need for a particulate filter. With only EGR and SCR technology, the installation will be unaffected. Scania-developed systems for engine management and emission control ensure an attractive blend of performance and operating economy.

The function of the SCR system is based on the injection of a urea solution (AdBlue or DEF, Diesel Exhaust Fluid) into the after-treatment system.

With EGR, a small amount of exhaust gases is returned to the intake of the engine, diluting the intake air and reducing the oxygen concentration. This will reduce the combustion temperature and further reduce emissions.
